DMM261 – Rule-Based Workflow: A Flexible Tool used in SAP MDG

About this session

This session provides a very practical experience of SAP Master Data Governance (MDG) and is based on the new MDG chapter in the 3rd edition of the SAP Press book "Practical Workflow for SAP". The general concept of workflow in SAP MDG and the components of the Rule-Based Workflow (RBWF) will be explained. Each attendee will build a workflow for their own change request type. With this they will be able to run the process and post a first change request to create a new material.

Agenda

Short Introduction to SAP Master Data Governance

MDG's Workflow Concept and Overview of Rule-Based Workflow

Blueprinting and Implementing a Change Request Process

Today's exercise

Short Introduction to SAP Master Data Governance

SAP Master Data Governance

Consistent high-quality master data for your entire organization

SAP Master Data Governance is a **state-of-the-art master data management application**, providing **preconfigured**, domain-specific master data governance to **monitor and remediate** eventual data quality issues, to **centrally** create, change, and distribute, or to **consolidate** master data across your **complete enterprise system landscape**.

There are **two versions**: **SAP Master Data Governance on SAP S/4HANA** and **SAP Master Data Governance** (technically on SAP ERP 6.0).

Central governance or consolidation for consistent master data

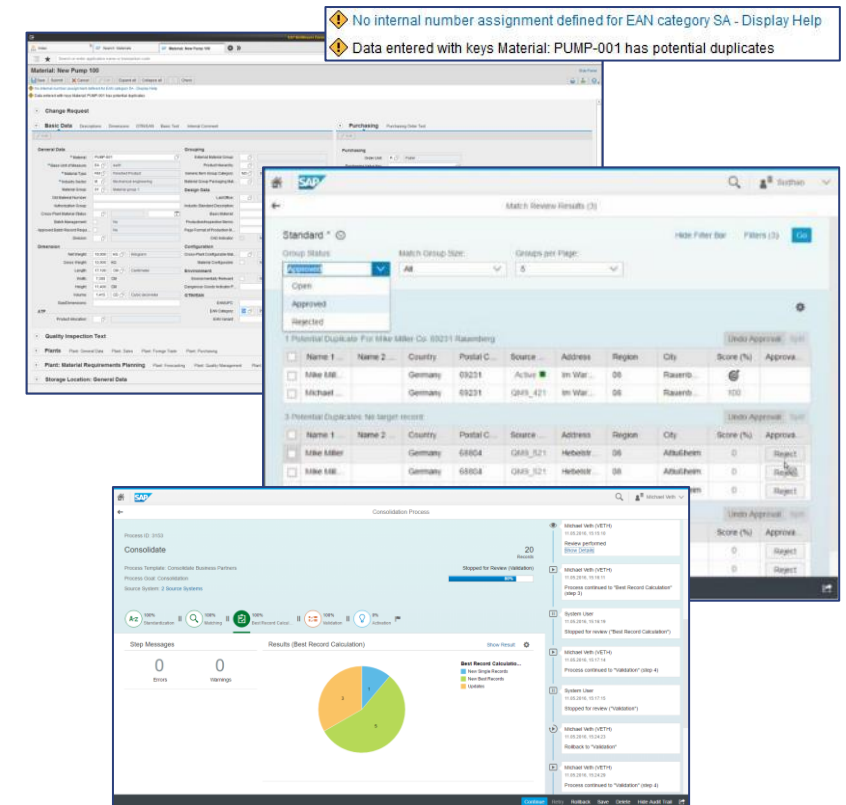

- Enables centralized governance, compliance, and transparency of master data during creation and change through integrated staging, approval, and central audit trail
- Delivers consistent definition, authorization, and replication of key master data entities
- Eliminates error-prone manual maintenance processes for master data in multiple systems
- Supports consolidation of decentralized master data in any enterprise system landscape to create best records and key mapping between duplicates
- Optionally combines consolidation with central governance for sustained master data quality

Data quality

- Analyze process quality, manage and monitor data quality, and optionally integrate with SAP HANA smart data quality, SAP S/4HANA Cloud for data enrichment, or SAP Data Services for quality, enrichment, and remediation

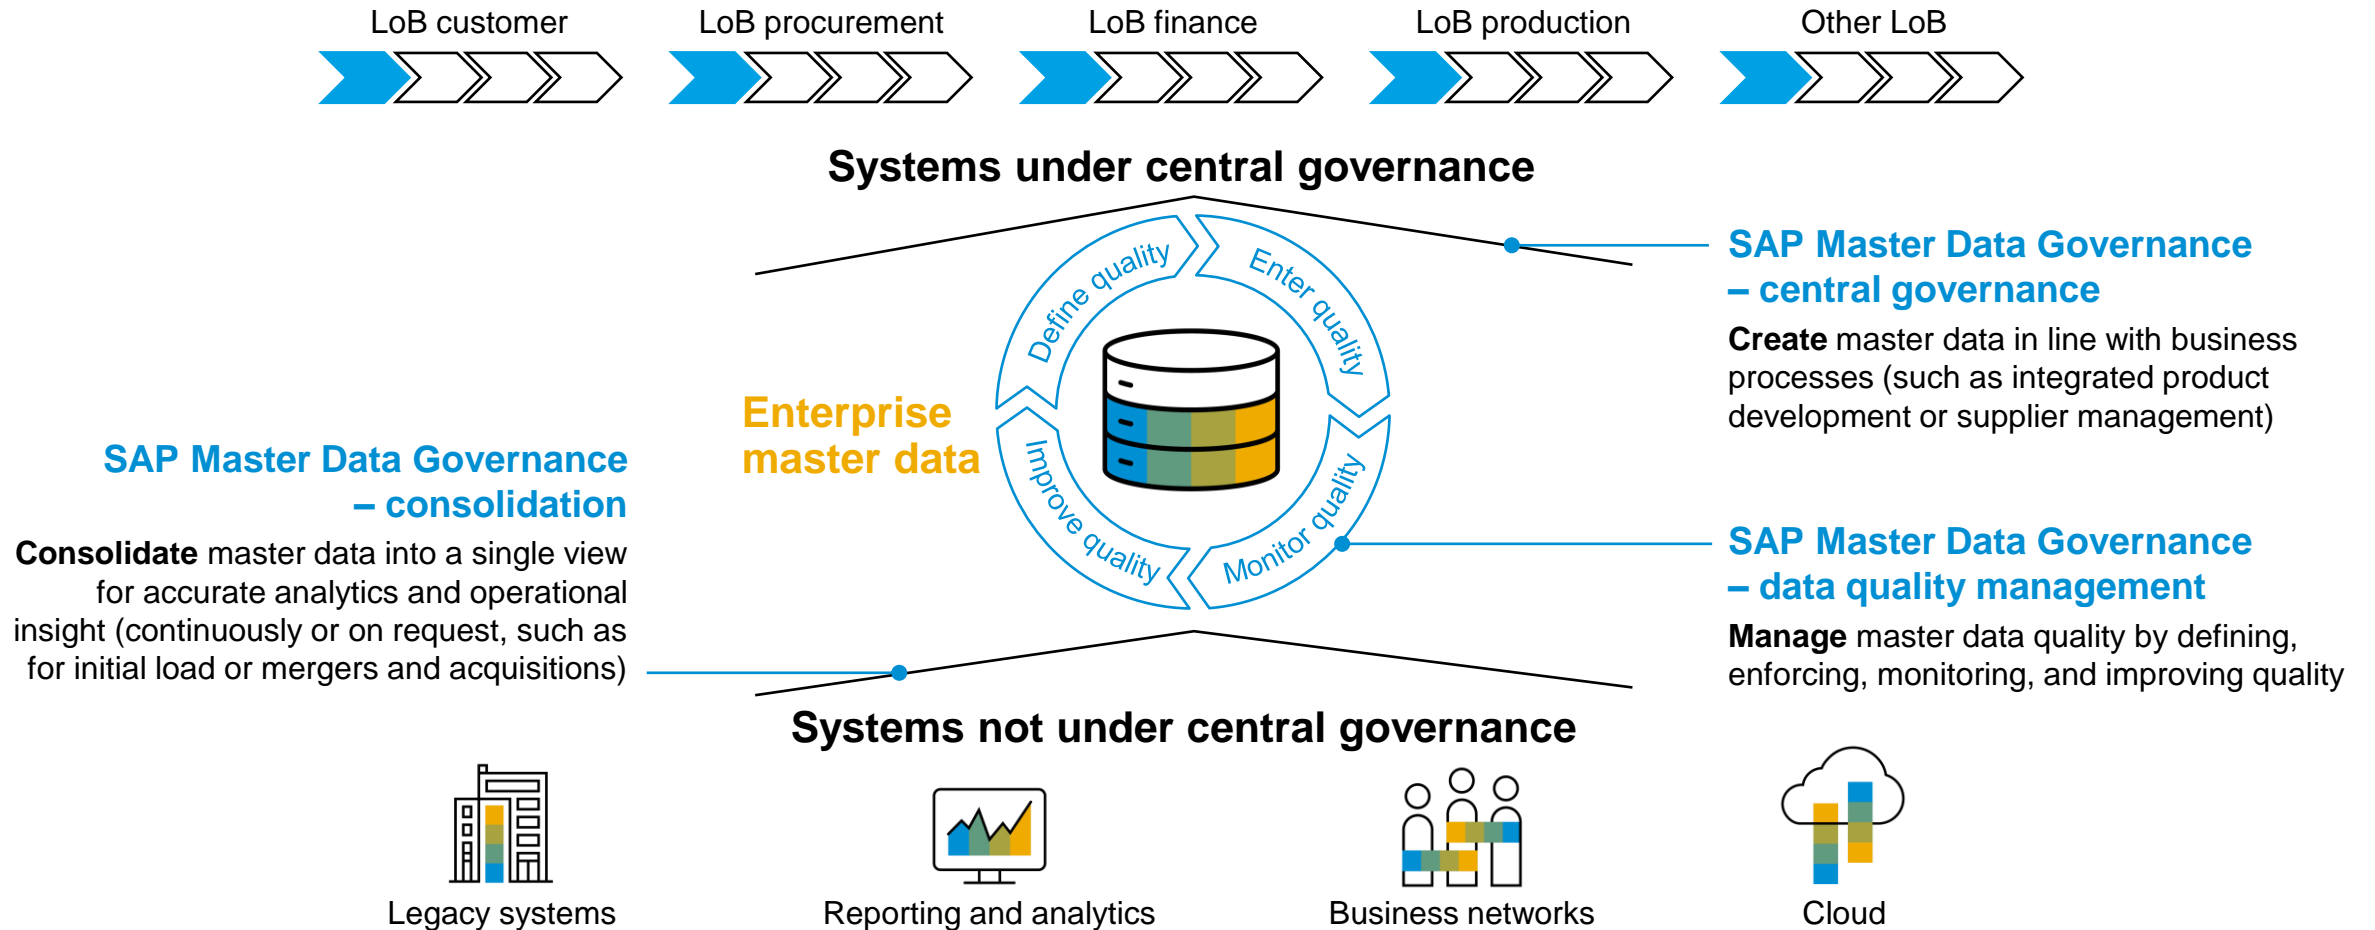

Integration and reuse

- Native integration and openness to integrate 3rd-party services
- Reuse of SAP data model, existing business logic, and configuration for data validation
- Open application to manage your own master data flexibly also for non-SAP environments

Typical approaches to master data management

Central governance and distribution / de-central ownership and consolidation

All typical approaches are supported: central governance with distribution, decentralized ownership with consolidation, data quality monitoring with remediation

Introduction to SAP Master Data Governance, Central Governance

Summary of the Key Capabilities

Master Data Governance for Financial Data

- Create or change Chart of Accounts, GL Accounts, Companies, Profit and Cost Centers, Cost Elements and respective hierarchies
- Data distribution to operational systems via Services (SOA) or ALE

Master Data Governance for Material Data

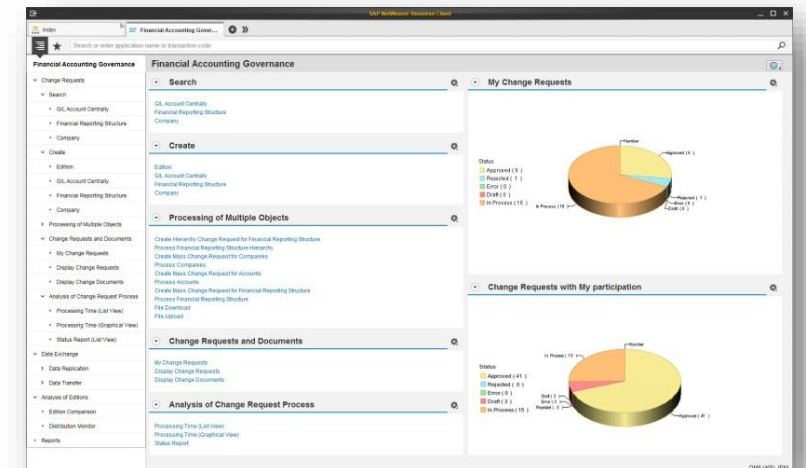

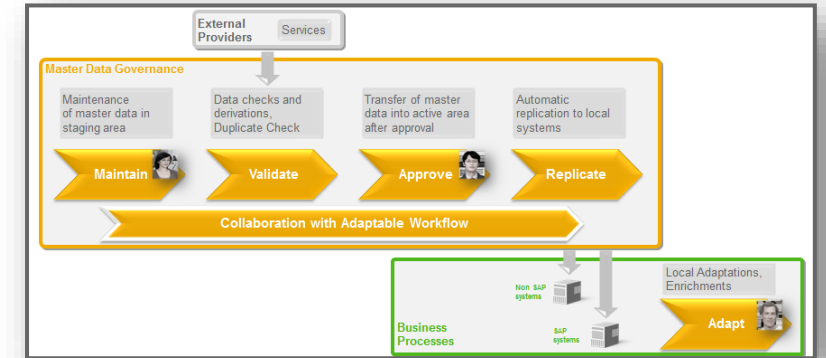

- Create or change a broad range of material master data attributes and classification
- Mass data upload and mass change capabilities
- Data quality services such as duplicate check
- Data distribution to operational systems via ALE

Master Data Governance for Supplier and Customer Data

- Create or change a broad range of supplier or customer master data attributes as well as the underlying business partner attributes
- Mass data upload and mass change capabilities
- Data quality services such as duplicate check and address validation
- Data distribution to operational systems via SOA or ALE

Master Data Governance for Custom Objects

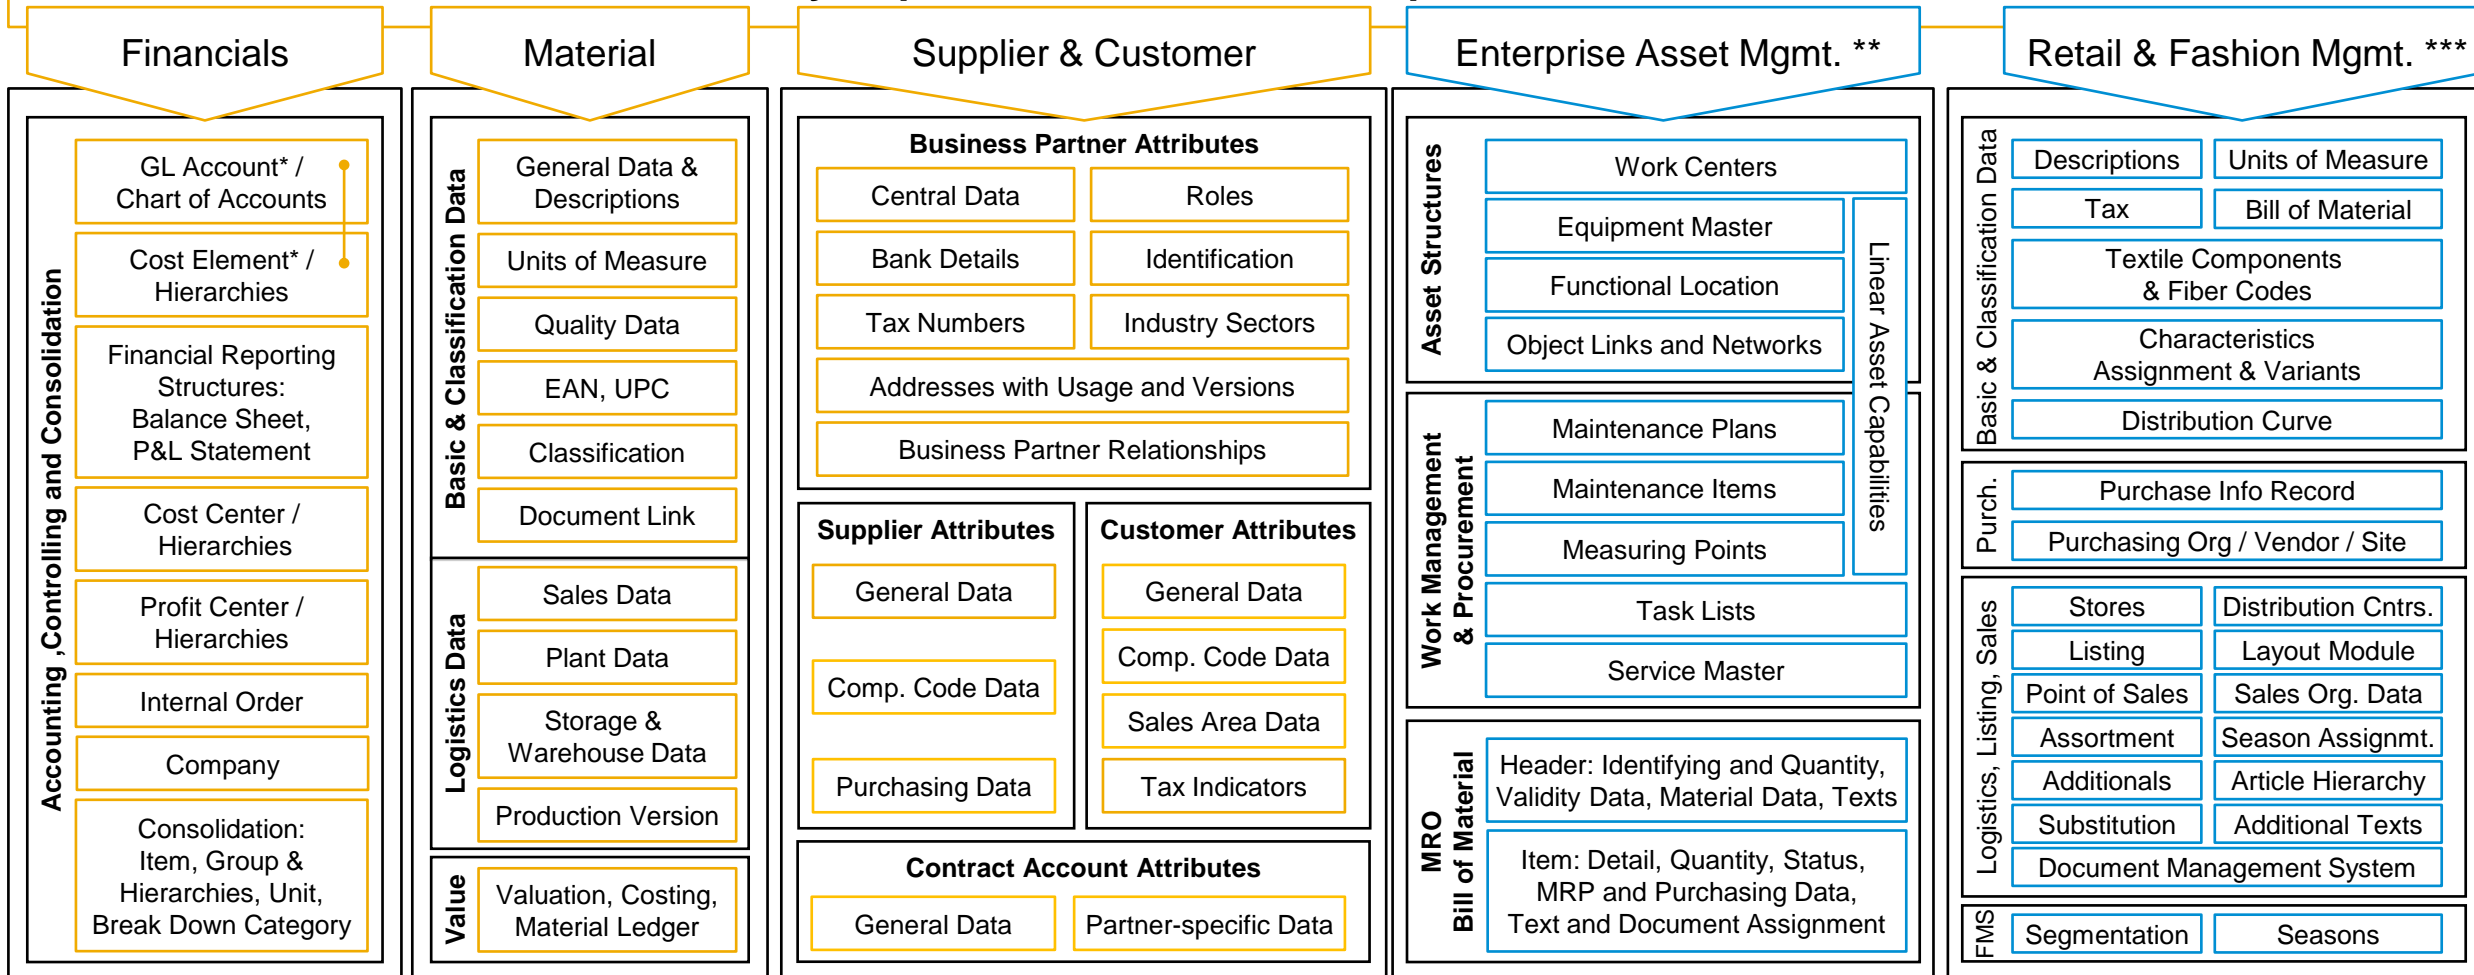

- Framework for data modeling, UI configuration, validation, and distribution of custom-defined master data objects

SAP Master Data Governance

Integrated Object Model

Out-of-the box delivery of proven data models for operational and financial master data

* User interface integration between GL Account and Cost Element only supported in SAP MDG on SAP S/4HANA

** SAP MDG, enterprise asset mgmt extension by Utopia

*** SAP MDG, retail & fashion mgmt. extension by Utopia

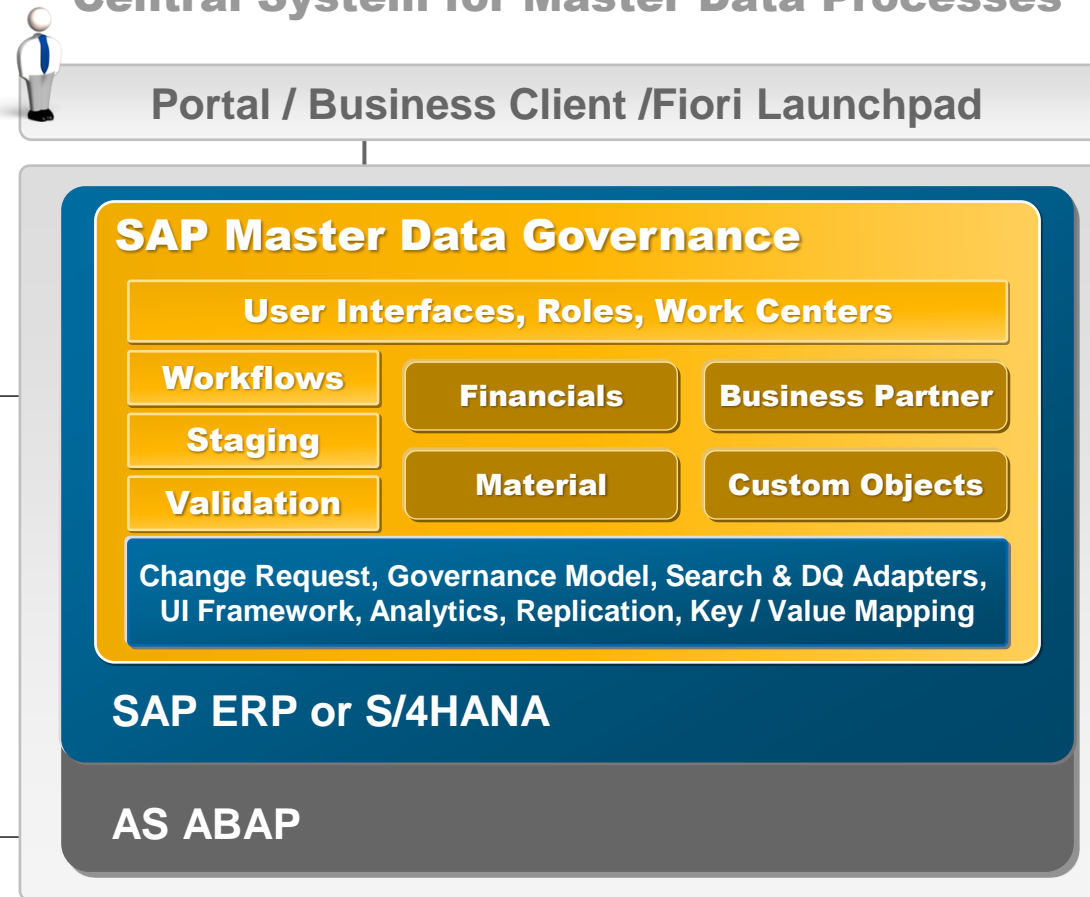

Introduction to SAP Master Data Governance

High-level Architecture Overview

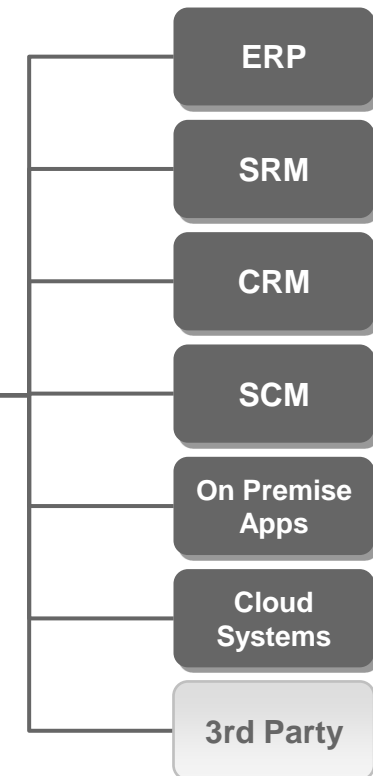

Optional Parts

Central System for Master Data Processes

Client Systems

Integrate services for data cleansing & matching, use HANA for similarity ranked search & aggregation

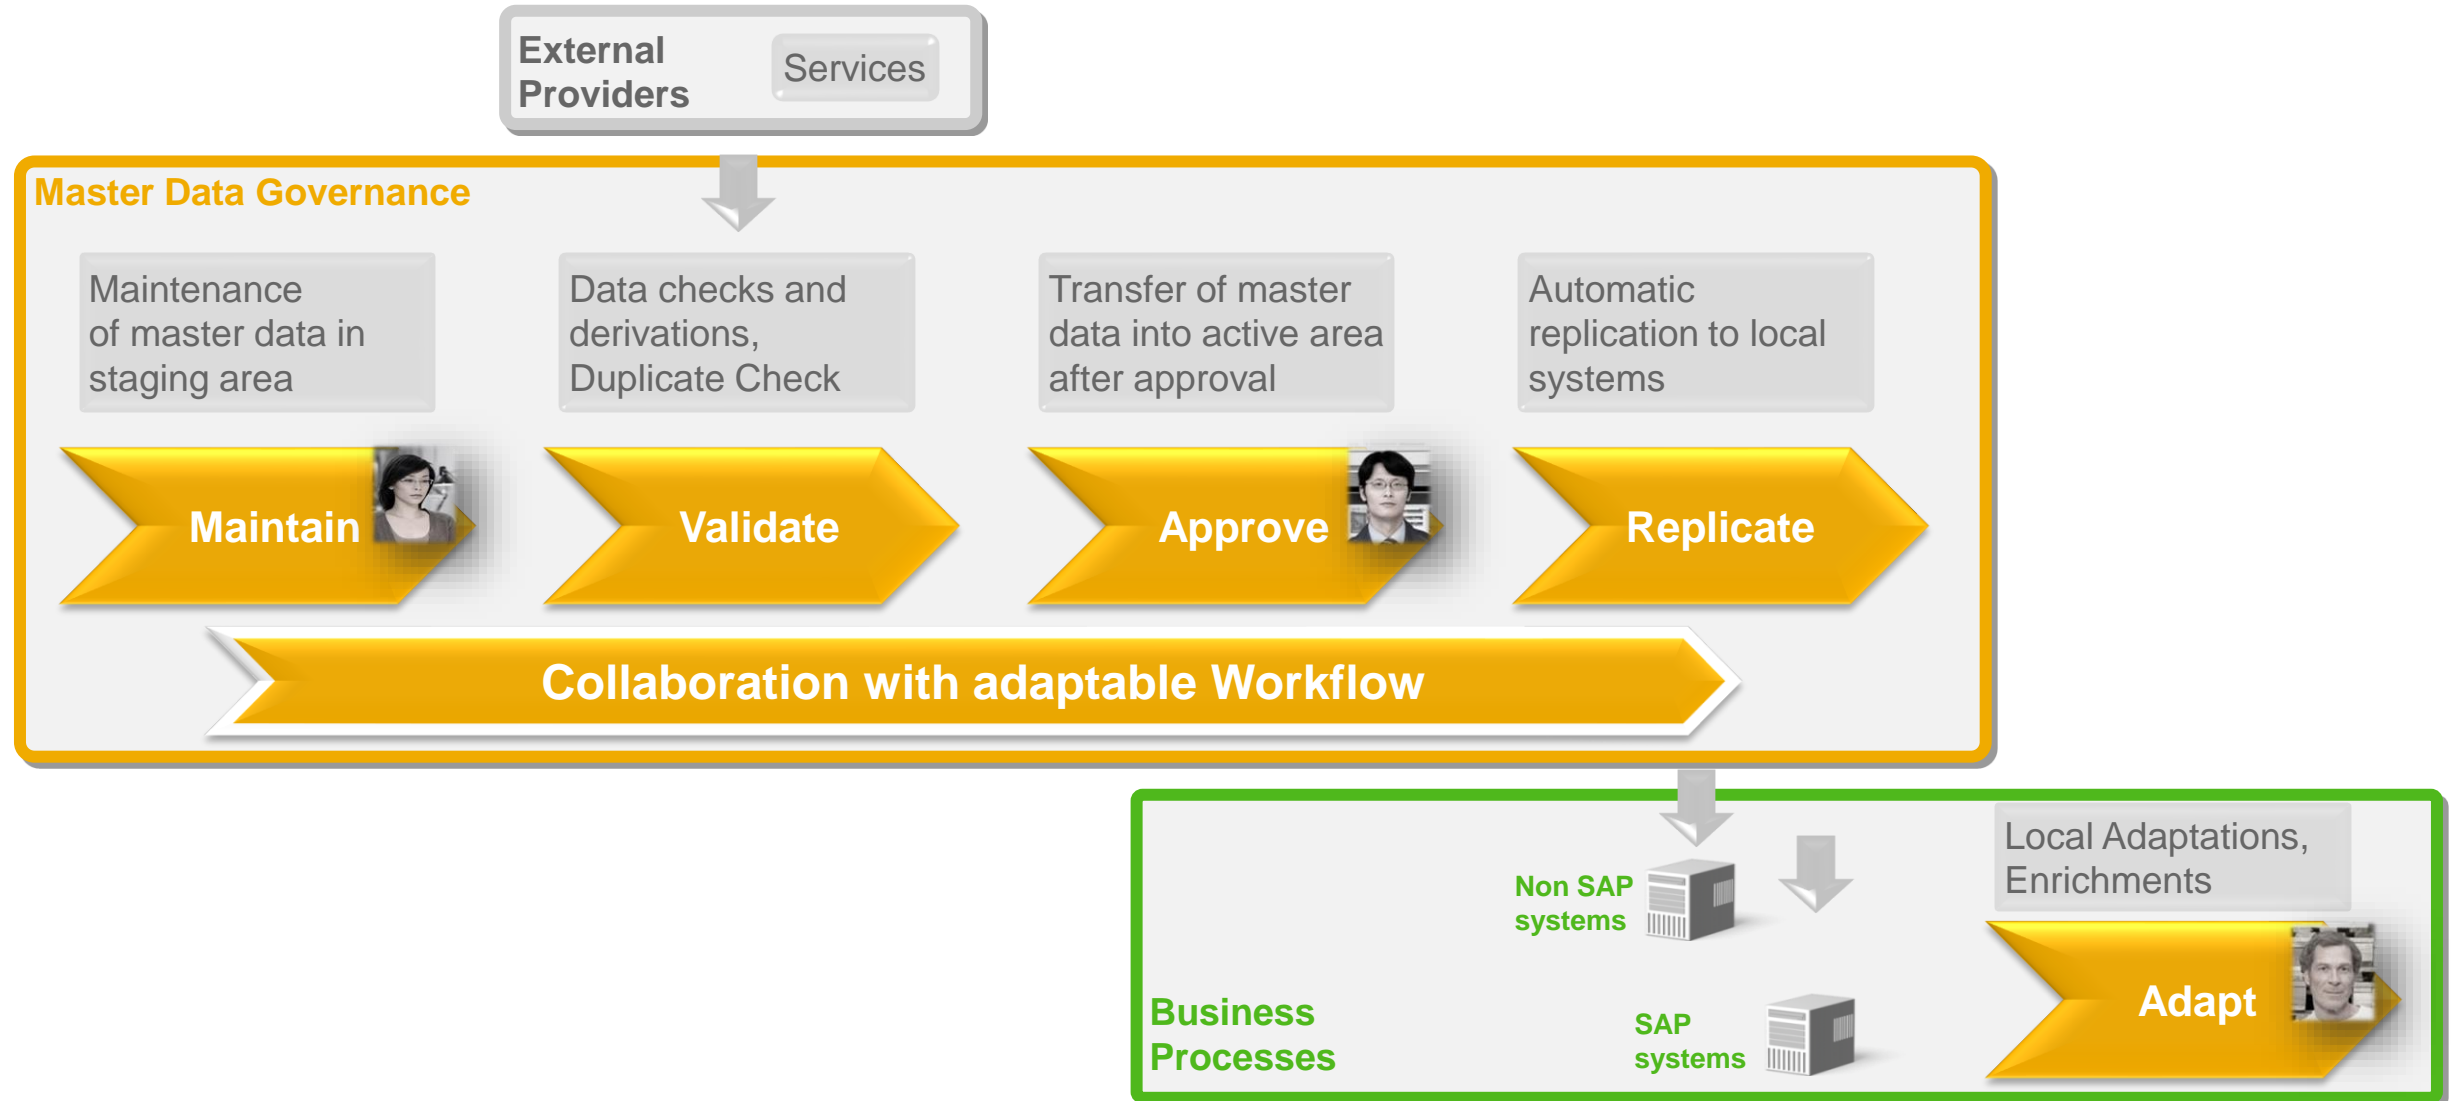

Tight integration of the governance process into SAP business logic and leveraging standard SAP Application Server for ABAP

Client systems are integrated via various channels (like SOA, ALE, RFC, File) across on premise and cloud

	8	001	08 (Roll Back Change Request)

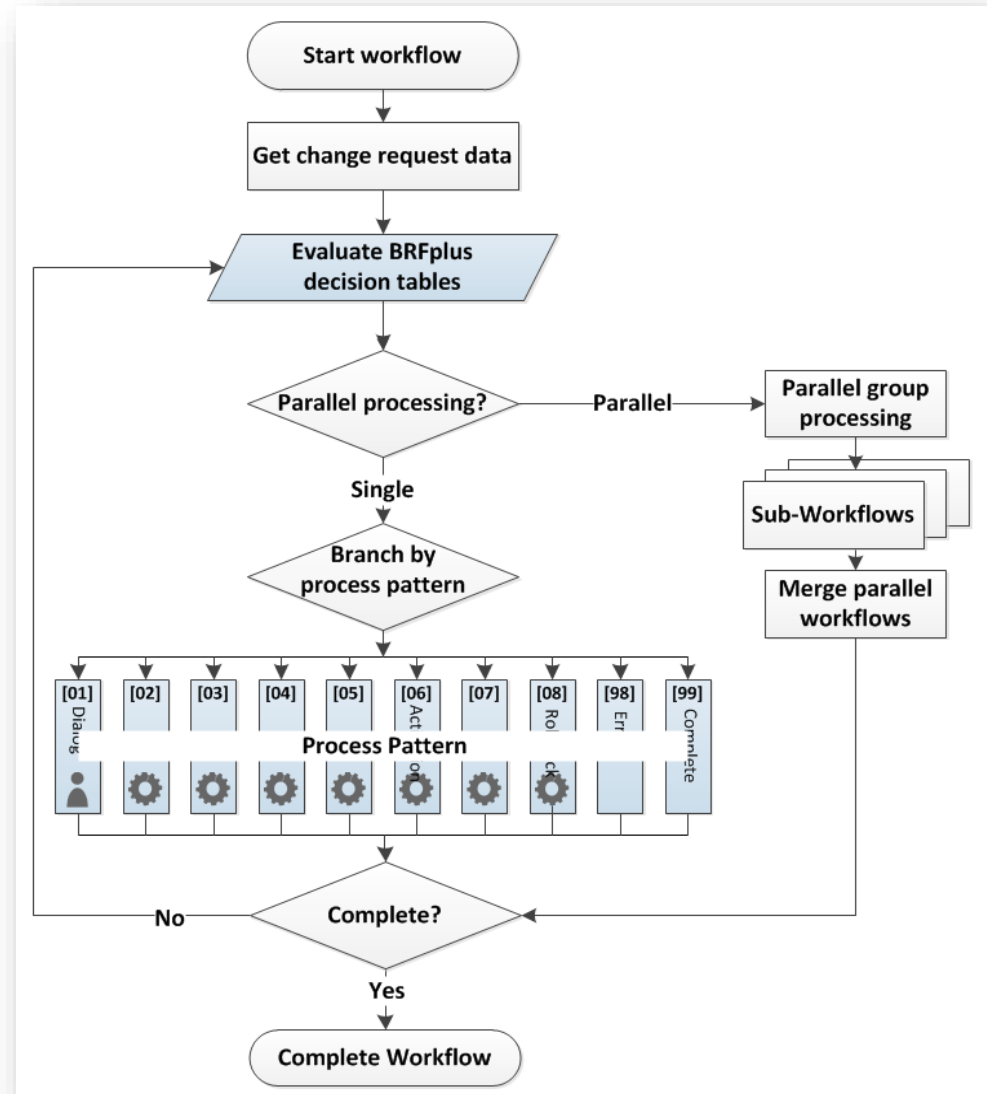

Overview of Rule-Based Workflow

Rule-Based Workflow Template

Rule-Based Workflow Template

The generic workflow template (WS60800086) is the foundation of the RBWF. The different processes are reflected by BRFplus decision tables, which are maintained in the customizing for each change request type.

The combination of this workflow template with the BRFplus decision tables allows you to easily set up many different processes that can be flexibly changed through customizing.

Overview of Rule-Based Workflow

Single Value Decision Table

Single Value Decision Table

- The single value decision table (DT_SINGLE_VAL_<Change Request Type>) defines the flow between the change request steps. Based on the previous step, the action, and other parameters, this table returns the next step and other result parameters, most importantly, the condition alias that links to the other tables.

The screenshot shows the SAP interface for a Decision Table. At the top, the title is "Decision Table: DT_SINGLE_VAL_MAT01" with a "Display Mode" button. Below the title is a toolbar with icons for Back, Edit, Check, Save, Activate, Delete, and More. The main content area is divided into sections: "General", "Detail", and "Table Contents". The "Table Contents" section displays a table with 6 columns: CR Previous Step, Previous Action, Cond..., New Chng. Req. Step, and New CR Status. The table contains 8 rows of data, each representing a rule in the decision table. The rows are numbered 1 through 8 in the Cond... column. The New Chng. Req. Step and New CR Status columns are highlighted in green.

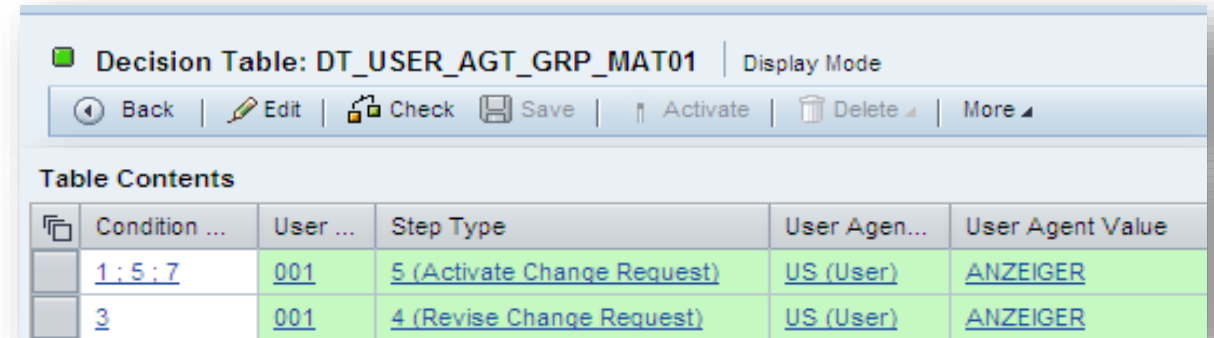

CR Previous Step	Previous Action	Cond...	New Chng. Req. Step	New CR Status
00 (Processing)		1	90 (Final Check)	02 (Changes to Be Executed)
90 (Final Check)	09 (Activate)	2	91 (Activation)	02 (Changes to Be Executed)
90 (Final Check)	10 (Send for Revision)	3	95 (Revision Processing)	02 (Changes to Be Executed)
91 (Activation)	31 (Activation successful)	4	99 (Complete)	05 (Final Check Approved)
91 (Activation)	<>31 (Activation successful)	5	90 (Final Check)	11 (Process Errors After Activation)
92 (Revision)		6	99 (Complete)	06 (Final Check Rejected)
95 (Revision Processing)	07 (Submit Request)	7	90 (Final Check)	02 (Changes to Be Executed)
95 (Revision Processing)	08 (Withdraw)	8	92 (Revision)	02 (Changes to Be Executed)

Overview of Rule-Based Workflow

User Agent and Nonuser Agent Decision Tables

User Agent Decision Table

- The user agent decision table (DT_USER_AGT_GRP_<Change Request Type>) determines the users involved in the change request process and which actions they can execute.

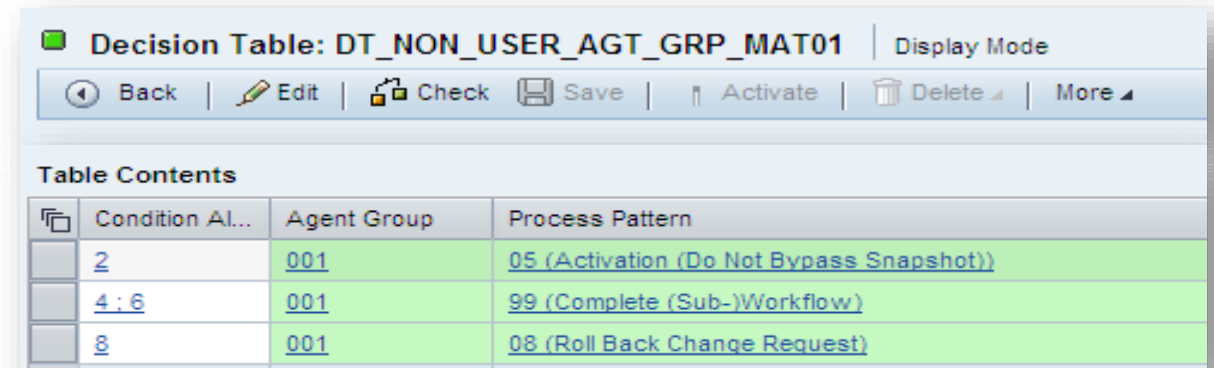

The screenshot shows the SAP interface for Decision Table: DT_USER_AGT_GRP_MAT01. The table has five columns: Condition, User, Step Type, User Agent, and User Agent Value. It contains two rows of data.

Condition ...	User ...	Step Type	User Agen...	User Agent Value
1; 5; 7	001	5 (Activate Change Request)	US (User)	ANZEIGER
3	001	4 (Revise Change Request)	US (User)	ANZEIGER

Nonuser Agent Decision Table

- The nonuser agent decision table (DT_NON_USER_AGT_GRP_<Change Request Type>) contains the background steps involved in the change request process that don't have end-user participation.

The screenshot shows the SAP interface for Decision Table: DT_NON_USER_AGT_GRP_MAT01. The table has three columns: Condition, Agent Group, and Process Pattern. It contains three rows of data.

Condition Al...	Agent Group	Process Pattern
2	001	05 (Activation (Do Not Bypass Snapshot))
4; 6	001	99 (Complete (Sub-)Workflow)
8	001	08 (Roll Back Change Request)

Blueprinting and Implementing the Change Request Process

Blueprinting the Change Request Process

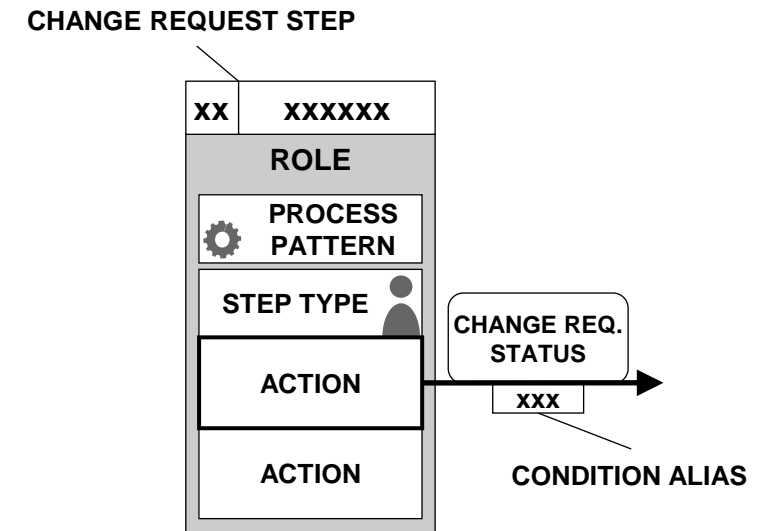

Notation for the Process Diagram

Notation

If you want to create a blueprint for the process, you must specify the following information in the process diagram:

- All steps and connections
- Change request step types or process pattern
- Change request actions
- Change request statuses
- Condition alias

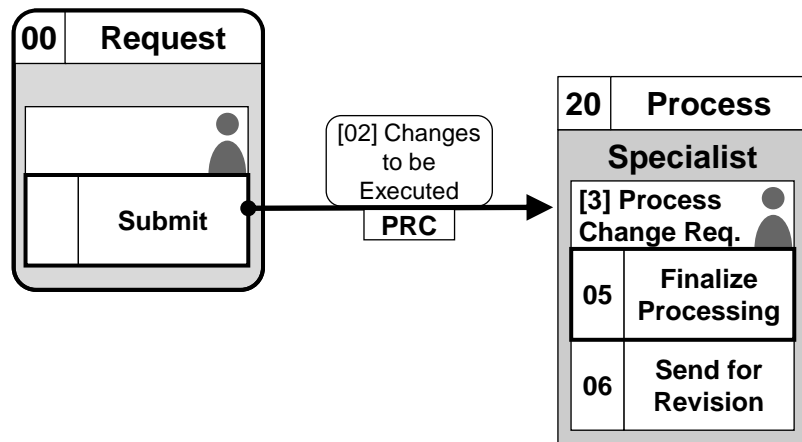

In order to create a diagram that is easy to read, we use the shown notation. This includes all relevant information needed to implement the process in SAP MDG.

Blueprinting the Change Request Process

Method with Rule-Based Workflow

- A change request process can include several approval and revision phases

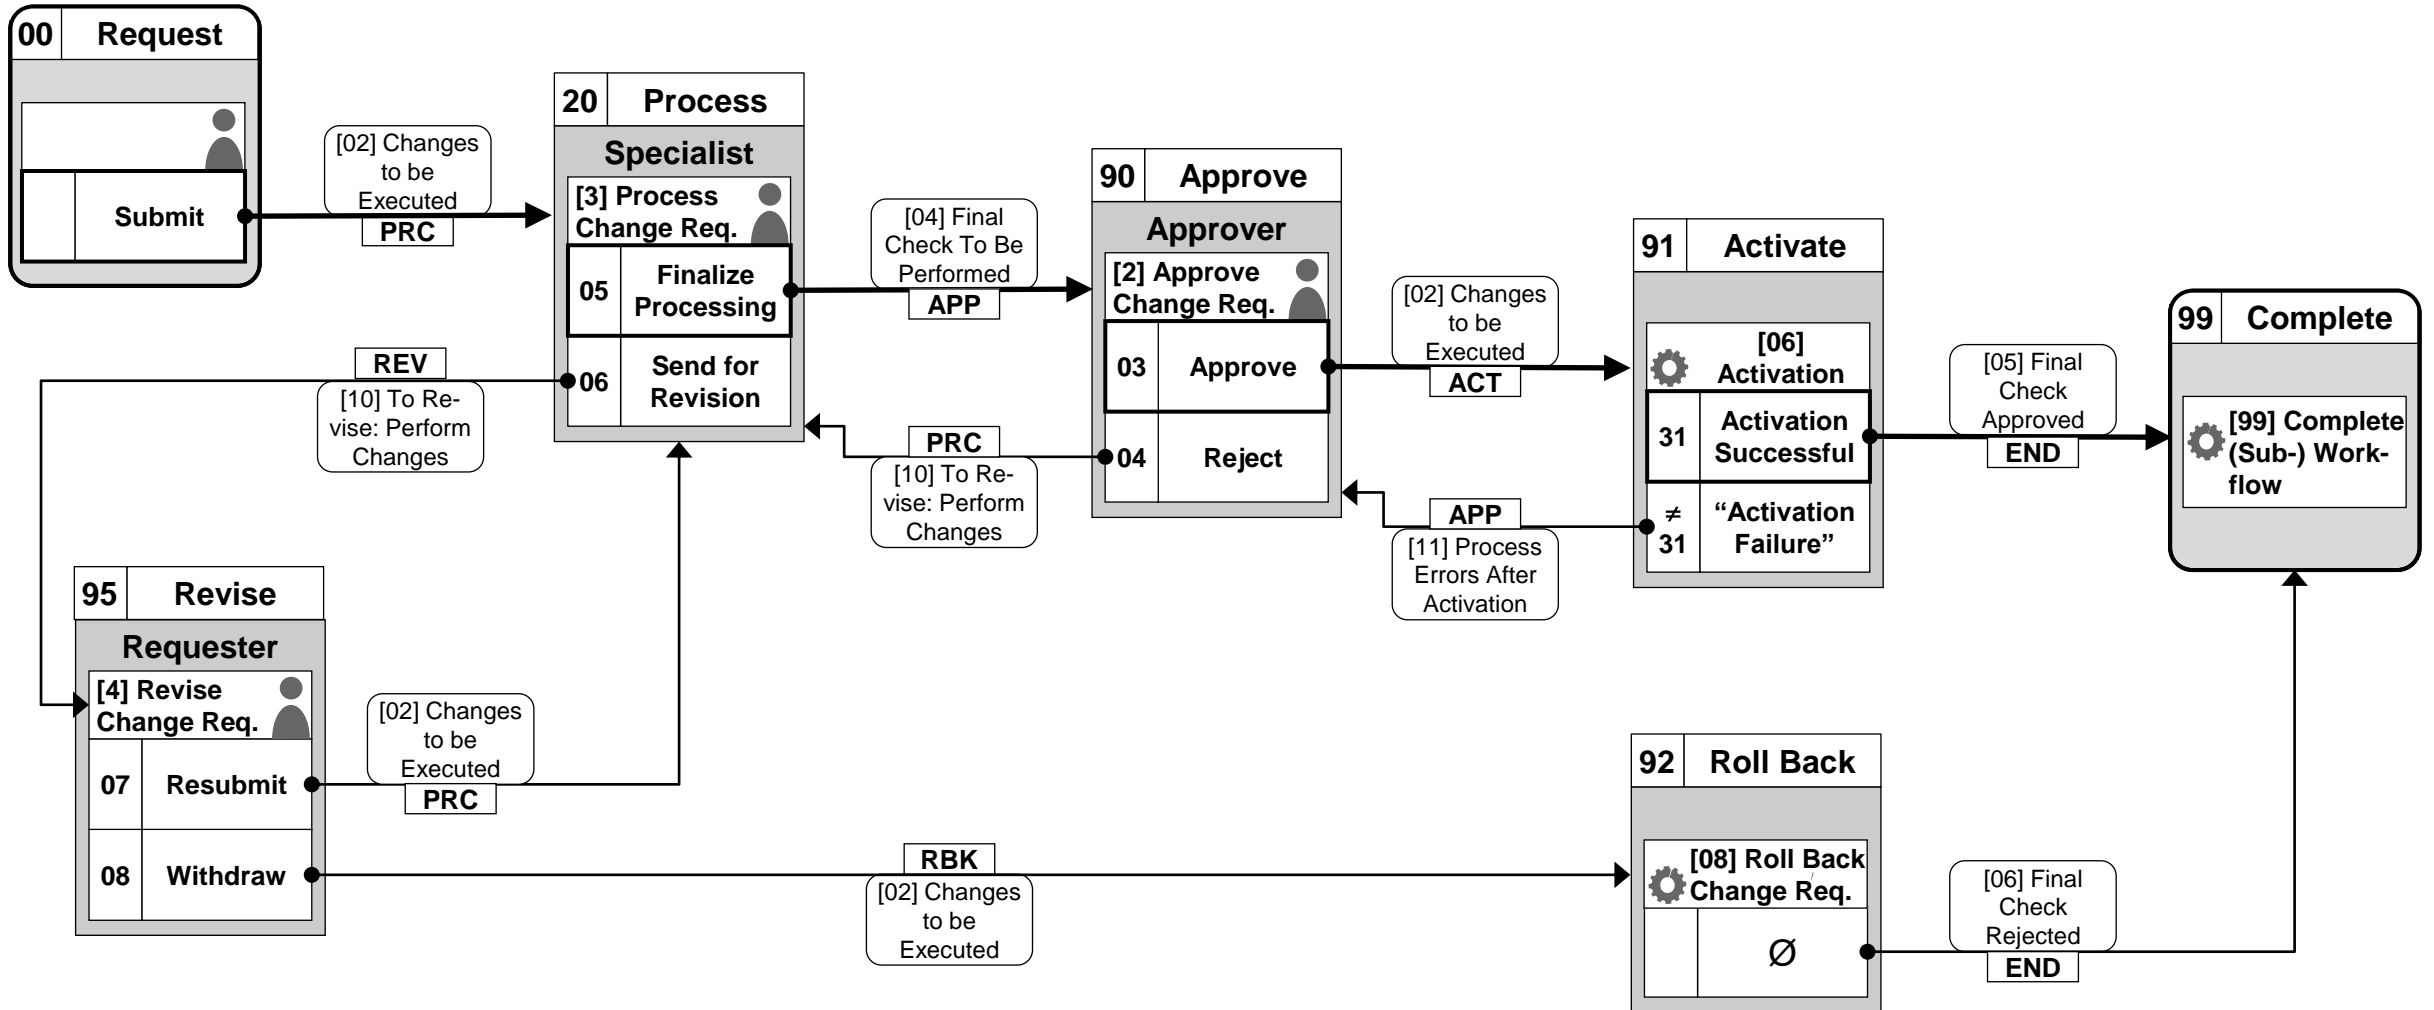

Blueprinting Your Change Request Process

- Define the process flow and decide which steps and loops are needed
- Decide which step types are needed for the dialog steps and enhance the flow diagram with out coming actions of each step
- Enhance the flow diagram with process pattern for the background steps
- Enhance the flow diagram with status
- Enhance the flow diagram with condition alias

Blueprinting the Change Request Process

Process Diagram

Implementing the Change Request Process

Method with Rule-Based Workflow

- Rules-Based Workflow offers you a quick and easy way to build the change request process!

Implement Your Change Request Process

- Customizing: Create a New Change Request Type
- Customizing: Define Change Request Steps
 - Single Value Decision Table
 - User Table
 - Non User Table

Implementing the Change Request Process

Customizing

Create a New Change Request Type

Change View "Type of Change Request": Overview

New Entries BC Set: Change Field Values

Dialog Structure

- Type of Change Request
 - Entity Types
 - Scope on Entity Type Level
 - Business Activities
 - Service Level Agreement for Change Request

Type of Chg. Request	Data Model	Description (medium text)	Objects Requi...	Single Object	Parallel	Main Entity Type	Workflow
Z261_150	MM	Create Material (Simple)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	MATERIAL	WS60800086
ZCONTMAS	ZS	Mass Processing of Contractors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	CONTRACTOR	WS60800086
ZCRCL	ZS	Create Clin	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	ZRECORD	WS60800086

Define Change Request Steps

Change View "Workflow Step Numbers": Overview

New Entries BC Set: Change Field Values

Type of Chg. Request	CR Step	Keys	Validation	Description (
Z261_150	0	<input type="checkbox"/>	<input type="checkbox"/>	Request
Z261_150	20	<input type="checkbox"/>	<input type="checkbox"/>	Process
Z261_150	90	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Approve
Z261_150	91	<input type="checkbox"/>	<input type="checkbox"/>	Activate
Z261_150	92	<input type="checkbox"/>	<input type="checkbox"/>	Roll Back
Z261_150	95	<input type="checkbox"/>	<input type="checkbox"/>	Revise
Z261_150	99	<input type="checkbox"/>	<input type="checkbox"/>	Complete

Exercise 1 – Introduction and Customizing

In this exercise you will:

- Understand the naming convention
- Logon to the system M34
- Customizing: Create a new change request type
- Customizing: Define the change request steps

Logon to the PC

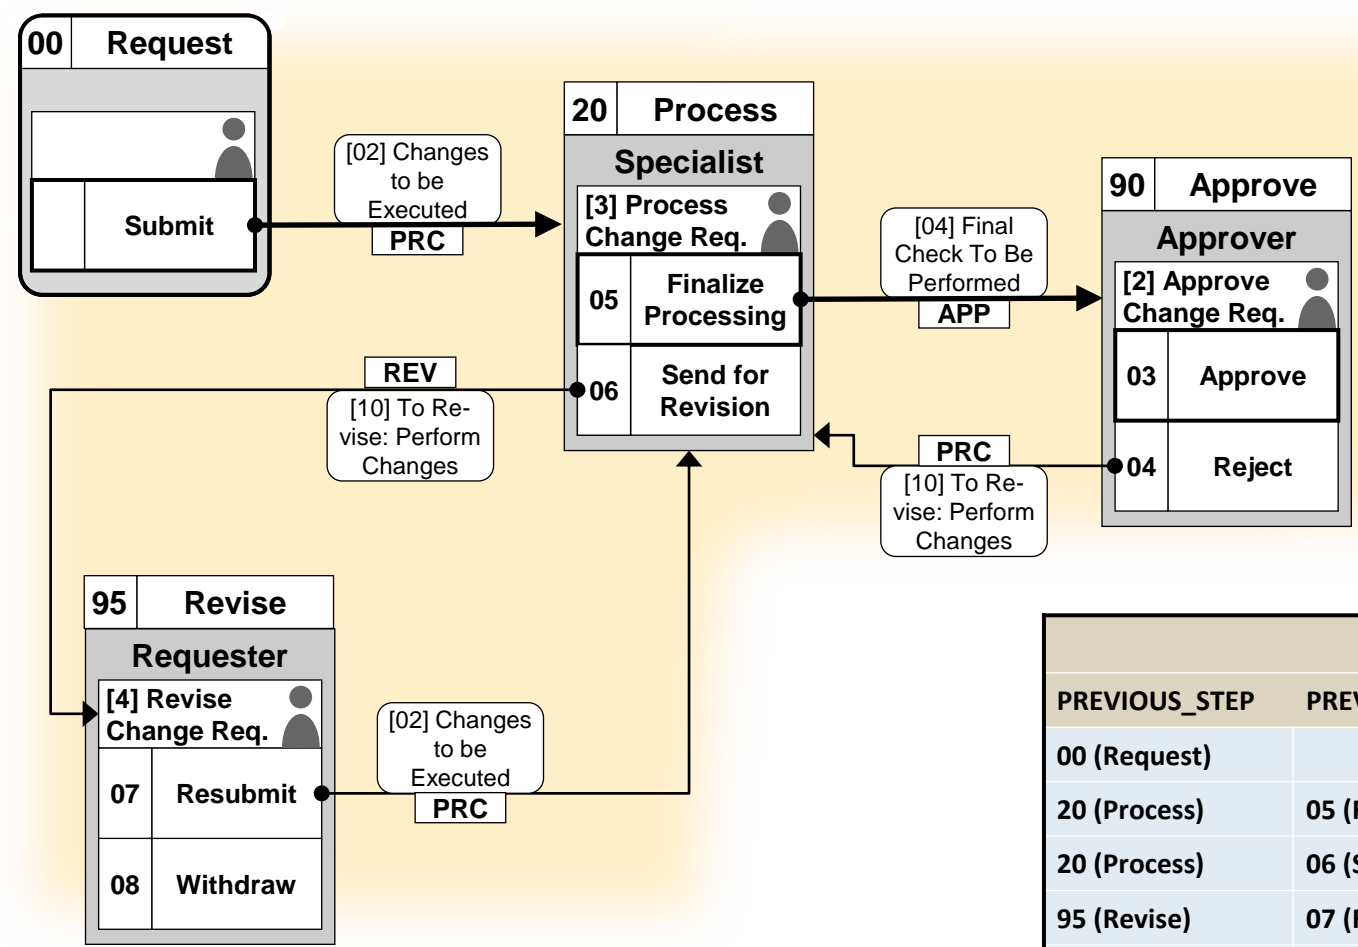

- User: Student, Domain: Fair
- Password: Welcome14

In all exercises, please make sure that you only work on **your own objects**. Here, please ensure to really pick the data reserved for your group number.

Implementing the Change Request Process

Build the Single Value Decision Table

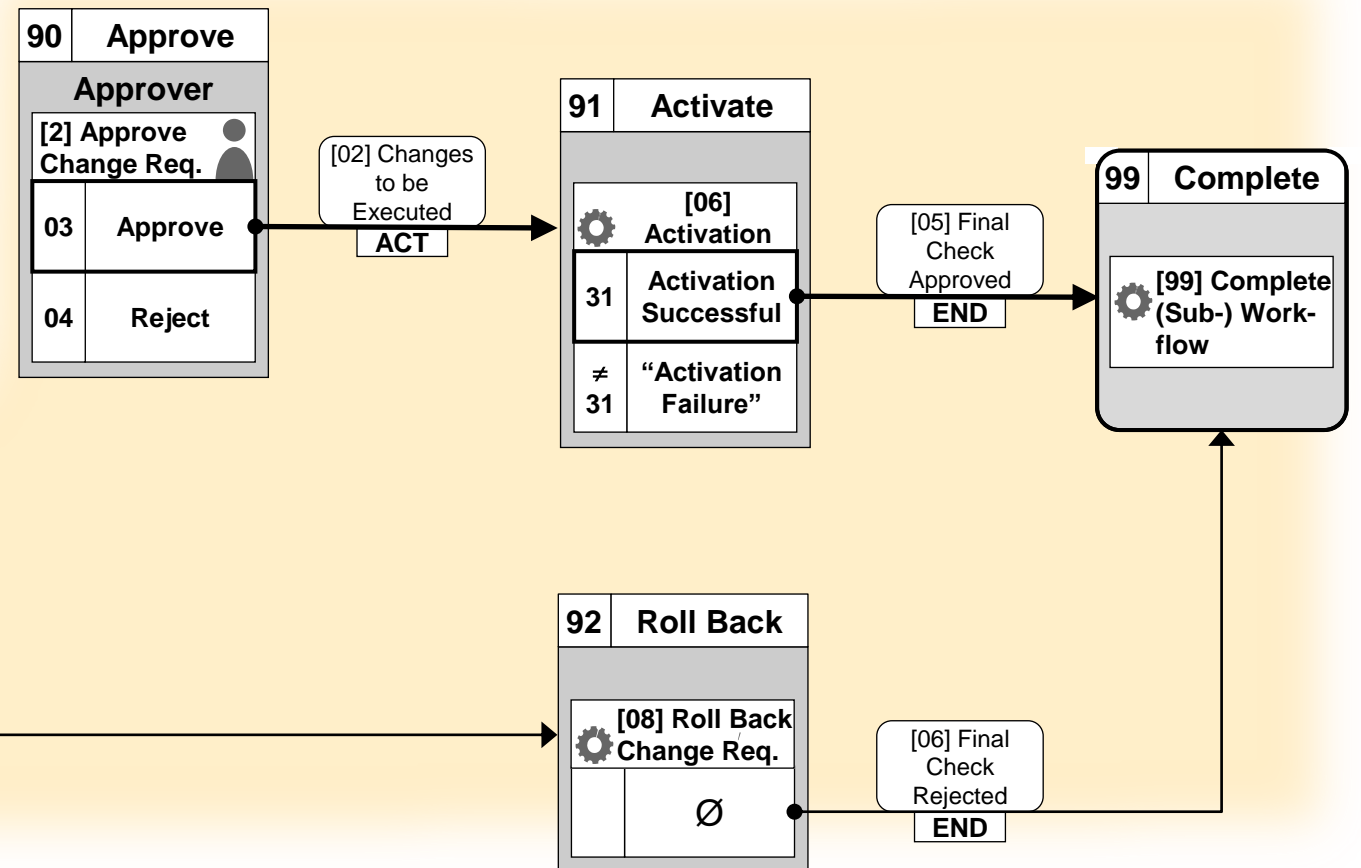

Single Value Decision Table				
PREVIOUS_STEP	PREVIOUS_ACTION	COND_ALIAS	NEW_STEP	NEW_CR_STATUS
00 (Request)		PRC	20 (Process)	02 (Changes to Be..)
20 (Process)	05 (Finalize Processing)	APP	90 (Approve)	04 (Final Check to Be..)
20 (Process)	06 (Send for Revision)	REV	95 (Revise)	10 (To Revise: Perform..)
95 (Revise)	07 (Resubmit)	PRC	20 (Process)	02 (Changes to Be..)
95 (Revise)	08 (Withdraw)
90 (Approve)	03 (Approve)

Implementing the Change Request Process

Build the Nonuser Agent Decision Table

Nonuser Agent Decision Table			
Condition	Alias	Agent Group	Process Pattern
ACT		001	06 (Activation)
RBK		001	08 (Roll Back)
END		001	99 (Complete (Sub-) Workflow)

Exercise 1 – Introduction and Customizing

In this exercise you will:

- Understand the naming convention
- Logon to the system M34
- Customizing: Create a new change request type
- Customizing: Define the change request steps

Logon to the PC

- User: Student, Domain: Fair
- Password: Welcome14

In all exercises, please make sure that you only work on **your own objects**. Here, please ensure to really pick the data reserved for your group number.

Exercise 2 – Configuration

In this exercise you will:

- Maintain the single value decision table to implement the change request process, that we've blueprinted previously
- Maintain the user agent decision table
- Maintain the nonuser agent decision table
- Understand the design of the rule-based workflow built via the decision tables

In order to do so, you will execute the following steps:

- Maintain your content in the decision tables, using the process diagram
- You can also use Transaction *USMD_SSW_RULE*.

In all exercises, please make sure that you only work on **your own objects**. Here, please ensure to really pick the data reserved for your group number.

Blueprinting Your Change Request Process

Process Diagram for the Exercise 2

Exercise 3 – Run the process

In this exercise you will:

- Logon to the system using SAP NetWeaver Business Client -Desktop (NWBC)
- Create a material using your new change request type

In order to do so, you will execute the following steps:

You will have 3 different roles:

- As a product manager you request a new material number
- As a product specialist you maintain additional data
- As a product approver you check and approve the data

In all exercises, please make sure that you only work on **your own objects**. Here, please ensure to really pick the data reserved for your group number.
